

The RockHawk

SilverHawk®-R LS-C

Conquer calcium.

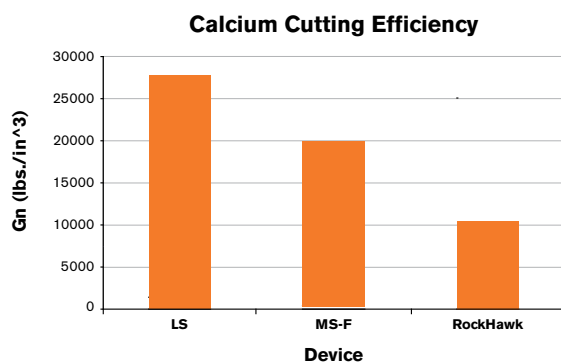

SilverHawk-R LS-C Peripheral Catheter for Surgical Use

The LS-C “RockHawk” is the advanced endovascular device designed to treat complex, hard, calcified lesions in the peripheral vasculature.

The unique cutter employs a carbide structure that:

- Has more mass and durability
- Treats lesions which may be resistant to conventional treatment

In vitro bench testing results indicate that the LS-C device cuts simulated calcium with considerably less force than existing SilverHawk products.
